## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

### **DETAILED ACTION**

1. In response to the Office action mailed October 3, 2007 the Amendment has been received on December 10, 2007.

Claims 28 and 29 have been newly added.

Claims 1-29 are currently pending in this application.

### ***Allowable Subject Matter***

2. Claims 1-29 are allowed.

3. The following is an examiner's statement of reasons for allowance:

Claim 1 is allowed because prior art fails to teach or make obvious a radiation detector module including: a radiation shield disposed between a detector array and the electronics, the radiation shield being substantially absorbing with respect to a penetrating radiation, the radiation shield including openings communicating between the detector array and the electronics; electrical feedthroughs passing through the radiation shield openings and electrically connecting the detector array and the electronics; and an insulating support that retains the electrical feedthroughs in an arrangement comporting with an arrangement of the radiation shield openings as claimed in combination with all of the remaining limitations of the claim.

Claim 21 is allowed because prior art fails to teach or make obvious a method for detecting penetrating radiation traveling in a first direction, the method

comprising: electrically communicating the electrical signals via feedthroughs in a radiation shield disposed behind a second face of a planar region to electronics disposed behind the radiation shield while absorbing the remainder of the penetrating radiation with the radiation shield, wherein the electrical signals are communicated over electrical conductors electrically isolated from the radiation shield as claimed in combination with all of the remaining limitations of the claim.

Claim 26 is allowed because prior art fails to teach or make obvious a radiation detector module including: a radiation shield disposed between the detector array and the electronics, the radiation shield being substantially absorbing with respect to a penetrating radiation traversing a scintillator, the radiation shield including openings communicating between a detector array and the electronics, wherein each radiation shield opening is slanted relative to an incoming direction of the penetrating radiation traversing the scintillator to prevent the penetrating radiation traversing the scintillator from passing through the opening; and electrical feedthroughs passing through the radiation shield openings and electrically connecting the detector array and the electronics as claimed in combination with all of the remaining limitations of the claim.

Claim 27 is allowed because prior art fails to teach or make obvious a radiation detector module including: first electrical feedthroughs passing through the first radiation shield openings and electrically connecting a detector array and the electronics; a second radiation shield disposed between the detector array and the electronics, wherein the second radiation shield substantially absorbs the radiation traversing a scintillator; second electrical feedthroughs passing through

openings of the second radiation shield, wherein the second electrical feedthroughs are spatially offset from the first electrical feedthroughs to prevent radiation traversing the scintillator from reaching the electronics; and electrical connectors connecting selected first electrical feedthroughs and second electrical feedthroughs to electrically connect the detector array and the electronics as claimed in combination with all of the remaining limitations of the claim.

Claims 2-20 and 22-25 are allowable by virtue of their dependence.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Response to Arguments***

4. Applicant's arguments, see pages 9-15, filed December 10, 2007, with respect to claims 1-29 have been fully considered and are persuasive. The rejection of claims 1-29 has been withdrawn.

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Morishita (US Patents 6,838,673 B2 and 6,707,066 B2), Yoshida (US Patent 6,393,092 B1) and Jeromin et al. (US Patent

Art Unit: 2882

5,381,014) teach the x-ray detector modules comprising the radiation shields and the insulating supports but fail to teach the electrical feedthroughs in the arrangement comporting with the arrangement of the radiation shield openings. Murphy et al. (US Patent 5,763,885) teaches an x-ray detector module comprising the radiation shields and the electrical feedthroughs but fail to teach an insulating support that retains the electrical feedthroughs in the arrangement comporting with the arrangement of the radiation shield openings.
